

MINUTES - Town Board- Water Meeting

Meeting Date: Wed., January 29th, 1997
Location: Town Hall

The meeting was called to order at 7:30 pm, with 4 members in attendance. Don and ??? from Quest were in attendance. (Gary Getrost ill and unable to attend.)

Quest Engineering went over the contents of the Computer Study on our water system. The study showed that Edwardsville would be our least expensive and quickest option for getting more water into the system. It also showed that since we have various sources and all the sources have water towers, and a good supply coming into our system, we should not need a water tower on the system at this time.

We also discussed ways to upgrade our system and the study showed that if we could "close the loop" anywhere in our system, and there are several locations that are obvious, it would improve our ability to provide not only water but fire hydrant service to the community.

The council requested Quest get back to us on the cost of doing a 201 Facilities plan for sewers and what grants are available.

No official action taken, meeting adjourned
